TenCate® develops and produces materials that function to increase performance, reduce costs and deliver measurable results by working with our customers to provide advanced solutions.

THE CHALLENGE
The City of Byron, IL was looking to develop new technology to decrease their maintenance costs and extend the life cycle of their roads.

THE DESIGN AND CONSTRUCTION
In 2012, Byron’s Public Works Director was scheduled to use a micro seal on various streets in the city and decided to incorporate the use of a pavement interlayer on part of the project to stop water from penetrating the micro seal.

THE PERFORMANCE
After a mild winter and multiple freeze thaw cycles, the difference in the section with TenCate Mirafi® MPV500 fabric was apparent. The section of the road that was not treated with the interlayer had significantly more reflective cracks appear which allowed water to enter the cracks and further deteriorate the roads base.

The City of Byron plans to use pavement interlayers in the majority of their upcoming road projects.

Micro seal and fabric after first winter.
